L3Harris Selected to Integrate, Accelerate US Space Force's ATLAS Space Domain Awareness Project.

The U.S. Space Force is replacing its legacy Space Defense Operations Center (SPADOC) with the Advanced Tracking and Launch Analysis System (ATLAS) Space Domain Awareness (SDA) project. A private global aerospace and defence technology company, L3Harris Technologies has been selected to upgrade and modernize the System to scale and handle the exponential growth of commercial constellations, increased debris, anti-satellite tests and adversarial threats. The project aims to enhance the Force's ability to track, analyse their trajectories, process space events and respond to threats in space and upgrade the Space Defense Operations Center.
