

Indigenization of Artificial Intelligence

As we all know Artificial Intelligence is rapidly transforming our world, and it is essential that we bring together industry leaders, policymakers, and researchers to discuss the latest advancements and address the challenges and opportunities that lie ahead.

Concentration of AI in the hands of few high-income countries would likely leave developing countries far behind. The latter will not benefit or very little from AI technologies and will lack ownership of such technologies. For developing nations like India, it is time to have parallel approach of sourcing technology from nations who already have certain accomplishment as well as focusing upon indigenization of AI. Since AI has a profound impact on a wide range of industries, the indigenization of Artificial Intelligence in India would focus more on Indian companies developing advanced AI solutions for accelerating the progress of major industries.

Conference on AI in DEFENCE, CYBER SECURITY, AGRICULTURE, HEALTHCARE AND EDUCATION

The Global Artificial Intelligence summit and awards 2024 bring forward discussions on hot topics, celebration of AI accomplishments, and inputs submission with various steering committees.

Please join us to exchange knowledge and networking with stakeholders, set-up agenda for the next year, and take further steps for the Indigenization of Artificial Intelligence in India.
